Research Growth Model — Client Factsheet

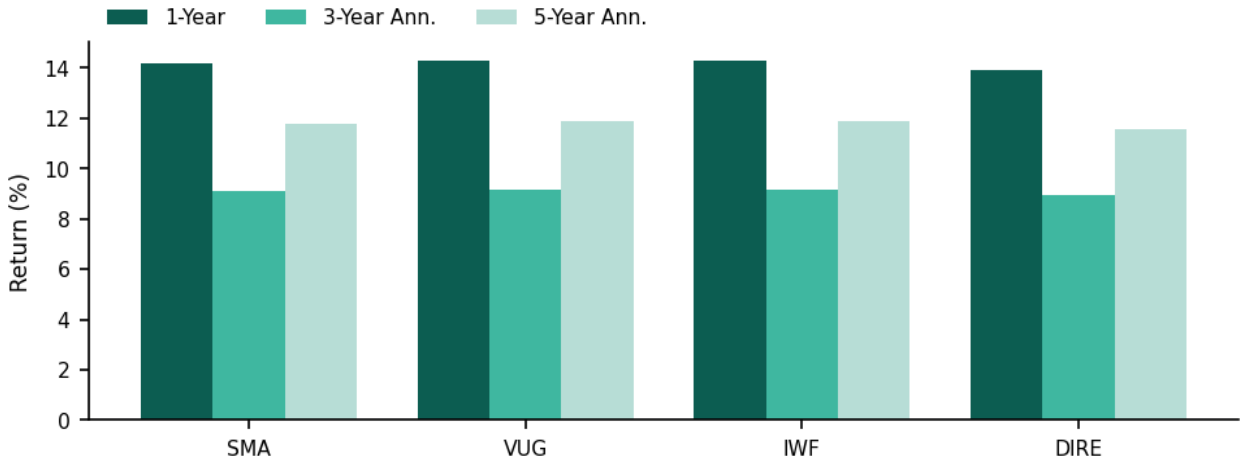
Benchmark: Russell 1000 Growth · As of June 30, 2026

The Research Growth Model targets US Large Cap Growth exposure and is offered in the implementations shown below. Each implementation applies the same underlying research view; they differ in fee structure, tax management capability, and account minimum. Performance shown for the separately managed account (SMA) and direct-indexing implementations reflects a composite of discretionary accounts, net of the applicable manager fee. Performance shown for exchange-traded fund (ETF) implementations reflects the fund's published net asset value (NAV) total return. These are different performance bases and are not directly comparable without adjustment; see “Important disclosures” on the final page.

Implementation comparison

Implementation	Vehicle	Fee	TLH-capable	Minimum
Beacon Hill Capital Management	Sma	40 bps	Yes	$250,000
Vanguard VUG	Etf	4 bps	No	None
iShares IWF	Etf	8 bps	No	None
Atlas Direct (Meridian Private Wealth)	Direct Indexing	25 bps	Yes	$250,000

Trailing performance by implementation



Performance basis differs by implementation type (composite net-of-fee for SMA/DI vs. NAV total return for ETFs); see disclosures.

Fee impact on a sample account

Implementation	Annual fee on $1,000,000

Beacon Hill Capital Management	$4,000/yr
Vanguard VUG	$400/yr
iShares IWF	$800/yr
Atlas Direct (Meridian Private Wealth)	$2,500/yr

Important disclosures

This material is for informational purposes only and does not constitute investment advice or a recommendation to buy or sell any security. Past performance does not guarantee future results. Composite performance for separately managed account and direct-indexing implementations reflects a blend of discretionary client accounts and may differ from the performance experienced by any individual account, particularly where tax-loss harvesting, client-directed restrictions, or funding timing cause dispersion. Exchange-traded fund performance reflects fund-level NAV total return and does not reflect any account-level program fee, which applies in addition to the fund's expense ratio for accounts held in an advisory program. Tax-loss harvesting is not available in a pooled ETF structure and its benefit, where available, depends on an account's specific tax situation and is not guaranteed. This document was prepared for a product walkthrough / proof-of-concept exercise; all figures are illustrative and do not represent actual firm performance, actual fee schedules, or the performance of any specific, currently offered product.
